

**Product Name :**  
Acrylic Distillation Tower**Product Code :**  
ELABBAWD003 LAB ENGINEERING**Description :**

Acrylic Distillation Tower

**Technical Specification :**

Acrylic Distillation Tower This working model is an impressive and dynamic educational piece of equipment. It dramatically demonstrates the operation of a column using water and air. The model's simulation is designed to show the basic process of distillation. Liquid traveling downward comes in contact with the vapors (gas bubbles) traveling upward, thus allowing the cooler liquid to condense any heavy compounds out of the lighter vapor stream.
