

Product Name :
Electrical Installation and Maintenance Training Evaluation
Equipment**Product Code :**
ELECTRICIAN0002**Description :**

Electrical Installation and Maintenance Training Evaluation Equipment

Technical Specification :

Type electrical installation and maintenance training evaluation device is a kind of general training platform according to the requirement of electrical installation in factory and indoors for maintenance electrician and electrical installation worker. The device is suitable for maintenance electrician and electrical installation worker and other professions that need electrical installation in all kinds of vocation and technical schools as public platform.

type electrical installation and maintenance training evaluation device can be installed electrically such as bridge installation, PVC pipe installation, droplight, incandescent lamp seat, fluorescent lamp ,switch, socket, distribution box ,control box installation, etc. The device also contains control and controlled objects like ac induction motor ,stepping motor for dc, servo motor ,temperature controller, thermocouple ,PLC, converter, touch screen and so on. Each operating group supporting a portable vehicle and components ark, which is facilitate the storage and installation of components and fundamentally solve the problems of inconvenient installation in the normal walls and narrow practice at school.

Device structure size: 2-people Group Training Assessment Device (Single): length2006mm*
width1003mm*height2410mm

Other structure refer to size

2-people group examination training device (single): Length 2810mm x width 1003mm x high 2410mm (recommended for contest)

4-people group training evaluation equipment (double): long 1906mm x width 2810mm x height 2410mm
