Metallurgical Specimen Cut-off Machine

**Technical Specification :**

This machine is required for quick and clean cutting off metallographic specimens from rods and tubes etc. The abrasive wheel turns at a constant speed driven by an electric motor suitable for operation from 230/230 volts for 440 volts A.C. supply. The specimen is held securely in a vice type holder and moved into the wheel. Specially placed and shaped coolant valve are conveniently placed at the front of the machine. Hinged safety hood lifts up for easy access for wheel replacement or tank cleaning.
