

Product Name :
Two Shaft Gas Turbine Simulator

Product Code :
PEM0013

Description :

Two Shaft Gas Turbine Simulator

Technical Specification :

Two Shaft Gas Turbine Simulator Nine different process parameters can be set using potentiometers on the front panel of the benchtop unit. The software provides a wide range of diagrams and graphs. The simulator can model the theoretical system limits without hazard, limits at which real systems would be destroyed or seriously damaged. The unit comprises a control panel, data acquisition card and software.
